Module 3: Fundamentals of Technopreneurship

1 Define Technopreneurship and Explain its Scope.

→ Technopreneurship is the process of creating developing and managing a business by using technology, innovation and enterprise - neurial skills. A person who starts such a business is called a technopreneur.

Scope of Technopreneurship :

(1) Information Technology -
Development of software, mobile applications, cloud computing and cybersecurity solutions.

(2) Artificial Intelligence -
AI-based applications, machine learning, robotics and automation.

(3) E-commerce -
Online shopping platforms, digital payments, and online marketplaces.

(4) Health care Technology -
Telemedicine, health apps, medical devices and digital health solutions.

(5) Agricultural Technology -
Smart farming, drones, IoT-based irrigation and crop monitoring systems.

(6) Education Technology -
Online learning platforms, virtual classrooms, and educational applications.

2. Explain characteristics of a Technopreneur

→ A technopreneur is an entrepreneur who uses technology and innovation to solve problems and create successful business.

Characteristics of a Technopreneur:-

(1) Innovative -
Continuously develops new ideas, products and services.

(2) Technology oriented -
Has good knowledge of modern technologies and their applications.

(3) Risk taking -
Will to take calculated risks while starting and managing a business.

(4) Creative Problem solver -
Identifies real world problems and develops effective technological solutions.

(5) Leadership skills -
Leads teams, motivates employees and manages projects efficiently.

(6) Adaptability -
Quickly adapts to changing technologies and market trends.

(7) Visionary -
Plans for long term growth and future opportunities.

3. Discuss Job Opportunities in Technoprereur-ship.

→ Technoprenaurship offers wide range of career opportunities in technology-driven industries.

Job Oppo rtunities :-

(1) Startup Founder -
Starts and manages technology-based oppor-tunities.

(2) Software Developer -
Designs and develops software, websites and mobile applications.

(3) Data scientist / AI Engineer -
Works on artificial intelligence, machine learning, and data analytics.

(4) Cybersecurity specialist -
protects organizations from cyber threats and ensures data security.

(5) Product Manager -
Plans, develops and manages technology products and services.

(6) Digital Marketing specialists :-
Promotes products using online platforms and digital tools.

(7) Cloud Computing Engineer -
Manages cloud infrastructure and cloud-based services.

Module 4: Applications of Technopreneurship

1. Explain Technology Entrepreneurship with examples.

→ Technology entrepreneurship is the process of creating and managing a business by using technology, innovation and technical knowledge to develop new products or services that solve customer problems and create value.

Features of Technology Entrepreneurship :-

(1) Focuses on innovation and new technology
(2) Uses digital tools, AI cloud computing, IoT, or software solutions.
(3) Solves real-world problems through technology.
(4) Creates employment and supports economic growth.
(5) Requires technical skills along with business knowledge.

Examples :-

(1) Zoho - Develops cloud based business software.
(2) Flipkart - Uses technology for online shopping and digital payments.
(3) Paytm - Provides digital payment and financial services through mobile application

2. Case study of a successful Technopreneur - Sridhar Vembu (Zoho)

→ Sridhar Vembu is the founder and CEO of Zoho Corporation, one of India's leading software applications companies. He is a successful technopreneur who built a global technology business.

Journey :-

(1) Founded Zoho Corporation in 1956.
(2) Started by developing affordable cloud based business software.
(3) Focused on innovation, quality and customer satisfaction.
(4) Expanded the company globally while keeping research and development in India.

Achievements :-

(1) Built a globally recognized software company.
(2) Created employment opportunities for thousands of people.
(3) Promoted rural development by setting up offices in villages.
(4) Developed more than 50 business applications used world wide.

3. Discuss Technology-Based product/service Entrepreneurship.

→ Technology-based product/service entrep--reneurship involves creating and delivering innovative products or services using modern technologies such as AI, cloud computing, IoT, mobile applications and the internet.

Technology-based products :-

(1) smart phones and smart devices.
(2) AI-based software and chatbots.
(3) smart home devices.
(4) Wearable fitness trackers.

Technology-based services :-

(1) Online banking and digital payments.
(2) E-commerce platforms.
(3) Telemedicine and online healthcare
(4) Online education platforms
(5) Cloud storage and software as a service (saas)

Advantages :-

(1) Faster and more efficient services
(2) Global market reach
(3) Lower operational costs
(4) Better customer experience
(5) Encourages innovation and economic growth.

(4) (19)

Module 5: Emerging Trends in Entrepreneurship

1. Explain franchising, subcontracting and Leasing.

→ Franchising is a business arrangement in which the franchisor gives another person or business called the franchisee, the right to use its brand name, products and business model in return for fees or royalties.

Features :-

(1) Use of an established brand name
